Quarterly Return

of the

Births, Deaths and Marriages registered in Scotland
for the Quarter ended 31st March 1951

REPORT.

Summary.—The birth-rate is lower than the average of corresponding quarters in recent years.

The marriage-rate is higher than in any first quarter since 1942.

The death-rate is the highest since the first quarter of 1941.

The infant mortality rate was the same as in the corresponding quarter of 1950 which was the lowest recorded for any first quarter.

The death-rate from tuberculosis is lower than in the corresponding quarter of 1950.

Live Births.—The 23,625 births in the quarter under review are 83 more than in the corresponding quarter of 1950. The rate per 1,000 population is 18·8, being 0·3 above the rate for the corresponding quarter of 1950 but 1·1 below the average. The birth-rate in the aggregate of large burghs is 19·0 as compared with 18·6 for the rest of Scotland. In individual areas the rate ranged in burghs from 26·5 in Port Glasgow, 24·3 in Clydebank and 23·5 in Coatbridge to 17·1 in Edinburgh, 16·7 in Aberdeen and 16·5 in Falkirk. In counties exclusive of large burghs it ranged from 22·3 in Clackmannan, 21·3 in West Lothian and 20·9 in Midlothian to 13·9 in Orkney, 13·7 in Perth and 11·8 in Bute.

The proportion of illegitimate births, 5·1 per cent., is 0·1 above that for the first quarter of 1950 but 0·8 below the average.

Of the 23,625 births registered, 12,143 were of male children and 11,482 of female children, being 1,058 male births per 1,000 females. Births registered in January numbered 8,063, in February 7,221 and in March 8,341, the equivalent birth-rates being 18·6, 18·5 and 19·3 respectively.

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—These rates are calculated on the provisional figures of the population of Scotland as established by the Census taken on the 8th April 1951. For the year 1950 the rates were calculated on an estimated home population which differs in its calculation from the Census population in including members of the Mercantile Marine abroad. Prior to the first quarter of 1950 the rates were variously calculated with reference either to what was referred to as a total population or as a civilian population.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the corresponding quarters of the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In Returns from 1941 to 1949 inclusive, classification was in accordance with the Fifth (1938) Revision.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

Still-Births.—The number of still-births registered during the quarter was 655 and is equivalent to a rate of 27 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 11,554, is 436 more than for the first quarter of 1950. The rate per 1,000 population was 9·2. It is 0·5 above that for the corresponding quarter of 1950 and 1·1 above the average. The rate in the aggregate of large burghs is 10·7 compared with 7·5 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 14·3 in Dumfries, 14·0 in Inverness and 13·4 in Paisley to 8·3 in Airdrie, 8·1 in Port Glasgow and 7·5 in Dumbarton. In counties exclusive of large burghs it ranged from 9·7 in Clackmannan, 9·6 in West Lothian and 9·5 in Midlothian to 4·5 in Sutherland, 3·6 in Ross and Cromarty and 3·4 in Inverness.

Of the 11,554 marriages registered, 1,977 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 1 was an irregular marriage registered on the authority of Decree of Declarator pronounced in the Court of Session. The remainder, 9,576, were solemnised by a minister of religion. In the corresponding quarter of 1950 civil marriages numbered 1,973 and those with a religious ceremony numbered 9,139.

Marriages registered in January numbered 2,954, in February 2,325 and in March 6,275, the equivalent marriage-rates being 6·8, 5·9 and 14·5 respectively.

Deaths.—Deaths registered during the quarter numbered 22,428, and equalled a death-rate of 17·8 per 1,000 population. They are 3,781 more than were registered in the first quarter of 1950. The rate is 3·1 more than in that quarter, and 2·8 more than the five years' average. The death-rate in the aggregate of large burghs is 18·3 compared with 17·3 in the rest of Scotland. The rate in individual large burghs ranged from 21·0 in Dumfries, 20·6 in Dundee and 19·9 in Hamilton and in Perth to 14·7 in Airdrie, 14·6 in Kilmarnock and 14·2 in Clydebank. In counties exclusive of large burghs it ranged from 27·0 in Nairn, 24·1 in Kinross and in Zetland and 23·9 in Argyll to 14·6 in Midlothian, 14·0 in Wigtown and 13·8 in Kincardine.

Deaths registered in January numbered 9,912, in February 6,337 and in March 6,179, the equivalent death-rates being 22·9, 16·2 and 14·3 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 1,088 and are equivalent to an infant mortality rate of 46 per 1,000 registered live births. This rate is the same as that for the corresponding quarter of 1950 and 10 below the five years' average. Among legitimate children the mortality was 45 per 1,000 births and among illegitimate children 70.

The infant mortality for the large burghs was 48, while for the rest of Scotland it was 44. In the large burghs individually it ranged from 76 in Airdrie, 73 in Coatbridge, Hamilton and in Ayr and 67 in Inverness to 21 in Perth, 19 in Clydebank and 11 in Arbroath. In counties exclusive of large burghs it ranged from 121 in Kinross, 77 in Berwick and 71 in Nairn to 22 in Stirling, 17 in Inverness and 14 in Orkney. No deaths of children aged less than one year occurred in the county of Peebles.

The neo-natal rate (deaths of infants under one month) was 25 per 1,000 live births and is the same as that for the corresponding quarter of 1950.

Causes of Death.—Principal Epidemic Diseases.—There were 984 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 690 more than in the first quarter of 1950. Influenza alone accounted for an increase of 643. The death-rate for this group is 78 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 30. These deaths include 1 from typhoid fever, 23 from cerebro-spinal fever, 52 from whooping-cough, 1 from diphtheria, 899 from influenza and 8 from measles. There were no deaths from scarlet fever. In the large burghs the highest rates were 190 in Perth, 167 in Rutherglen and 144 in Kilmarnock. In counties exclusive of large burghs the highest were 386 in Sutherland, 314 in Zetland and 233 in Nairn.

Tuberculosis.—The 723 deaths from all forms of tuberculosis are 103 less than in the first quarter of 1950. Of them 638 were ascribed to tuberculosis of the respiratory system and 85 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 58 per 100,000, that from respiratory tuberculosis being 51. The former rate is 7 below that for the corresponding quarter of 1950 and the latter is also 7 below. The rates from all forms and from the respiratory form are respectively 20 and 15 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,521 and equal a rate of 201 per 100,000. Allowing for change in classification introduced by the Sixth Revision of the International Lists of Diseases and Causes of Death these deaths are 39 more than in the first quarter of 1950. The rate is 16 above the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 1,467 and from pneumonia (including pneumonia of the newborn) 1,132. The corresponding death-rates per 100,000 population are 117 and 90. The average rates for the corresponding quarters of the previous five years are 81 and 75 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 31 and are equal to a rate of 1·3 per 1,000 live births. This rate is 0·3 above that for the corresponding quarter of 1950 but 0·6 below the five years' average. Including still-births the maternal death-rate is also 1·3 per 1,000.

Violence.—Deaths from violence numbered 697, and are equivalent to a death-rate of 55 per 100,000. In the first quarter of 1950 the number was 645 and the rate 51. Of the total deaths assigned to violence 124 were attributed to road transport accidents, an increase of 4 compared with the corresponding quarter of 1950.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the first quarter of 1951 and in the corresponding quarter of 1950 with the average rates for the quarter of the years 1946-1950.

CAUSE OF DEATH.	Death-rates per 100,000 Population.

* These figures represent the number of new claims made at Ministry of National Insurance offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES

Supplied by the Meteorological Office, Edinburgh

JANUARY 1951.

Another cold unsettled month with frequent snow. Total precipitation was below average in a few inland areas but considerably in excess over the greater part of the country. Sunshine was abundant for the season in the North and East.

Though there were several short mild spells in January, cold weather predominated. With mean temperatures everywhere below average, it was the third successive cold month. In most places mean values were one or two degrees under average, but at Balmoral and Dundee the deficiency reached 3 degrees. During the coldest spells which were the 1st-3rd, 11th-13th and 24th-29th, day readings rose little above freezing and severe night frosts were registered. On the 25th the maximum at Dalwhinnie was only 23° F., while 21 degrees of frost were recorded there on the morning of the 13th. Balmoral, Braemar and Glenlivet had 18 or 19 degrees of frost. Ground frosts were widespread and occurred every night except the 19th-22nd. Low ground minima were 9° F. at Dalwhinnie and Braemar on the 2nd and 13th respectively.

The 16th-22nd was the mildest period. At Prestwick Airport temperature reached 54° on the 17th while Dunbar, Auchincruive, Kilmarnock and Benmore (Argyll) had 53° on the 16th. These are only moderate "extremes" for January. Indeed a feature of the present winter has been the absence of any period of unusual mildness. At Nairn for instance the thermometer never exceeded 50° from the beginning of November till the end of January. This has not occurred at this station since the winter of 1916-17.

Sunshine was abundant for the time of year over most of Scotland and especially so in the North and East. Wick, Forres and Dumfries recorded their best January records for 5 or 6 years, and in Edinburgh it was the sunniest January since 1938. Forres, with 70 hours, had the most sunshine while other good records were Rattray Head (67), Lossiemouth and Dyce (65), Craibstone (64), Edinburgh (62) and Glenlivet (62). The dullest places included Fort William (4 hours), Onich (13) and Helensburgh (21).

Precipitation—much of it in the form of sleet and snow—was persistent until the 21st, there being in general only a few dry days. Thereafter, a short fair spell occurred in most places, but unsettled conditions returned at the close. Totals for the month showed a moderate to large excess in most places. Treet and a few areas in Kincardine and Angus had double the average. Snow fell up to a foot deep on the 10th, and, after a partial thaw on the 11th, fresh falls occurred on the 13th. A general thaw set in on the 17th, a good deal of flooding resulting from heavy rains and melting snow. On the 16th, 3.85 inches of rain fell at Kinlochquoich, 2.50 at Loch Sloy Power Station and 2.21 at Inveraray. Kinlochquoich had another heavy fall (2.87 inches) on the 17th and a further 2.00 inches on the 21st. These three falls accounted for half the month's total (17.52) at this station.

There was more fog than in any January since 1942. It was widespread at the end of the third week and at its worst in Forth-Clyde districts on the 24th. Little thunder occurred and, though stormy at times, there was less than the usual frequency of gales.

Meteorological Notes (*continued*).**FEBRUARY 1951.**

For the fourth successive month, mean temperature in Scotland was below average. Eastern districts were very wet, but the West was much drier than usual. Much of the precipitation fell as snow or sleet. Sunshine was about average for February but fairly large deficiencies occurred in Moray Firth districts.

Mean temperature (37.0° F.) was about two degrees below average. It was the coldest February in Scotland since 1947 and the fourth successive month with a mean value below average. Over the four months November to February the deficiency was 11½ degrees, the greatest for any corresponding period since 1894-95. Mean values last month were everywhere below average. At Inverness, Achnashellach, West Linton and Helensburgh the deficiency was 3 degrees or more. With winds frequently from the West and North-west, there was much cold weather in February and only fitfully did temperature rise above the seasonal level. The mildest days were the 1st and 28th. On the 1st the thermometer rose to 54° at Fort William and to 53° at Nairn while many observers reported a reading of 52° on this day. Dyce had 53° on the 28th. Though temperatures remained at a low level during most of the month, there were no exceptionally intense frosts. The coldest periods were the 3rd, 8th-11th and around the 25th. On the 3rd day temperature rose to only 30° at Dalwhinnie and that morning there were 17 degrees of frost in the screen. Glenmore Lodge (near Aviemore) reported 15 degrees of frost on the 8th and Glenlivet and Braemar 16 degrees on the 16th and 24th respectively. Ground frosts were frequent and widespread. Low ground readings were 8° F. (24 degrees of frost) at Glenlivet on the 16th, 12° F. at Dalwhinnie on the 10th and 21st and 12° F. at Glenbranter on the 11th.

Sunshine was about normal for the time of year but round the shores of the Moray Firth some places had a deficiency of about 20 hours. On the whole there was rather more sunshine than in the very dull Februaries of 1947 and 1948. Braemar registered its lowest February aggregate for 10 years while Duntuil, in Skye, on the other hand, has had only one sunnier (that of 1947) during this period. Benbecula, with 90 hours for the month, was easily the sunniest place in Scotland and other good records were Dunbar (78), Arbroath (76), Edinburgh (74), St. Andrews (73), Tiree (73) and Leuchars (72). At the other end of the scale came Midcalder (39 hours), Fort William (39), Gordon Castle (39), Banff (40) and Braemar (40).

Precipitation showed a considerable excess in Eastern districts especially at coastal stations between the Forth and the Spey. To the West, however, where in a normal February totals are usually large, there was a decided shortage, some areas having a deficiency of about 30 per cent. Thus Braemar had nearly as much rain as Fort William, an unusual occurrence in February. In Shetland it was the wettest February for 20 years and Wick's total of 3.47 inches has not been exceeded there in any February since 1906. Much of the precipitation fell as snow especially inland and in hilly districts. Snow blizzards swept the counties of Perth, Inverness and Argyll on the 17th blocking many main roads. A train was isolated in the Moor of Rannoch for 30 hours and vehicles were stranded in Glencoe. On the 4th and 17th several measurements for 24 hours exceeded 2 inches of rain, notably 2.35 inches at Glen Tanar (near Aboyne) on the 4th and 2.65 at Dundonnell House, 2.39 at Glackour (both in N.W. Ross-shire) and 2.45 at Kinlochquoich—all on the 17th.

Gales were numerous, the stormiest periods being the 1st-5th and 16th-17th, while there was more fog than in any February since 1942. Thunder was heard at Benbecula on February 6th.

Meteorological Notes (continued).**MARCH 1951.**

Cold winds, frequent showers of snow and a good deal of frost made March a most disagreeable month. Total precipitation was mainly below average in inland and Western areas but appreciably in excess of average along the East Coast. There was a marked shortage of sunshine practically everywhere.

After a fairly mild opening, cold Northerly or Easterly winds kept temperatures very low throughout the rest of the month except around the 15th and 22nd. In most places mean values for the month were 1-2 degrees below average but as much as 3-4 or more in parts of East Scotland. With mean temperature (38.2° F.) $2\frac{1}{2}$ degrees below average for the whole country, it was the fifth successive cold month and Scotland's coldest March since that of 1947. The thermometer rose to only moderate levels during the short mild spells, the highest reading being 57° at Strathy on the 3rd and at Gordon Castle and Dunbar on the 22nd. Night frosts were frequent and some were intense in the second week. The lowest minima were 3° F. at Dalwhinnie on the 11th and 5° and 7° respectively at Glenlivet and Braemar on the 13th. On the ground the lowest readings were -5° at Glenlivet and -4° at Dalwhinnie.

Sunshine records were poor over most of Scotland, only one station—Tiree—having more than the normal. Along the East Coast and in Dumfriesshire aggregates were roughly 20-30 hours below average. The highest aggregates in March were Tiree (129 hours), Prestwick (116), Benbecula (113), Turnberry (111), Oban (108), Troon (103) and Arbroath (103). It was Tiree's sunniest March for 10 years. The dullest places included Midcalder (58), Braemar (63) and Glasgow (64). At Braemar and North Berwick it was the dullest March for 10 years while both Edinburgh and Glasgow registered their smallest March aggregates for about 15 years.

In March precipitation was mainly of the showery type. Snow and sleet showers fell frequently especially on high ground. Around the 10th-12th snow lay to a depth of 6-12 inches at Dalwhinnie and Glenlivet. Only a few places had more than three successive dry days, and there were several very wet days. On the 21st and 22nd heavy rains fell in West Scotland, a number of falls exceeding 2 inches in 24 hours, notably 4.25 at Loch Sloy Dam and 3.01 in Glen Etive on the 22nd. On the 21st 2.47 fell at Barnacarry on Loch Fyne and 2.37 at Glenbranter. Total precipitation showed a marked excess in East Scotland but to the West there was a deficiency, some inland districts having only about half the usual March amounts. Wick recorded an excess over average of 61 per cent., the total of 3.65 inches being its largest March rainfall since 1876.

There was more fog than in any March since 1942. The frequency of gales was somewhat below normal and no thunder was reported.

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGHs OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 31ST MARCH 1951.

IX. DISEASES OF THE DIGESTIVE SYSTEM

Diseases of Buccal Cavity and Oesophagus—
 Diseases of teeth and gums - - -
 Other diseases of buccal cavity - - -
 Diseases of oesophagus - - -

Diseases of Stomach and Duodenum—

Ulcer of stomach - - -
 Ulcer of duodenum - - -
 Gastritis and duodenitis - - -
 Other diseases of stomach - - -
 Appendicitis - - -
 Hernia - - -

Other Diseases of Intestines and Peritoneum—

Intestinal obstruction - - -
 Gastro-enteritis between 4 weeks and 2 yrs.
 Gastro-enteritis over 2 years - - -
 Chronic enteritis and ulcerative colitis - - -
 Peritonitis - - -
 Other diseases of intestines and peritoneum

Diseases of Liver, Gall Bladder and Pancreas—

Acute yellow atrophy of liver - - -
 Cirrhosis of liver - - -
 Other diseases of liver - - -
 Cholelithiasis - - -
 Other diseases of gall bladder and bile ducts - - -
 Diseases of pancreas - - -

X. DISEASES OF THE GENITO-URINARY SYSTEM

Nephritis and Nephrosis—

Acute nephritis - - -
 Nephritis with oedema, incl. nephrosis - - -
 Chronic nephritis - - -
 Nephritis not specified as acute or chronic - - -
 Other renal sclerosis - - -

Quarterly Return

of the

Births, Deaths and Marriages registered in Scotland
for the Quarter ended 30th June 1951

REPORT

Summary.—The birth-rate in the second quarter of 1951, while lower than the post-war average, is the same as the average for the years immediately prior to the war.

The marriage-rate was slightly below the average in recent years.

The death-rate was a little above the average of the past five years, but the infant mortality rate was again below the average.

The death-rate from tuberculosis shows a substantial improvement and this is true both of respiratory and non-respiratory tuberculosis.

Live Births.—The 24,311 births in the quarter under review are 335 fewer than in the corresponding quarter of 1950. The rate per 1,000 population is 19·1, being the same as the rate for the corresponding quarter of 1950 but 1·6 below the average. The birth-rate in the aggregate of large burghs is 19·4 as compared with 18·7 for the rest of Scotland. In individual areas the rate ranged in burghs from 23·2 in Airdrie and in Coatbridge, 23·0 in Greenock and 22·4 in Clydebank to 16·7 in Edinburgh, 16·4 in Falkirk and in Ayr and 15·2 in Rutherglen. In counties exclusive of large burghs it ranged from 22·3 in Caithness, 20·7 in Clackmannan and 20·5 in Lanark to 15·0 in Perth, 14·6 in Bute and 13·4 in Kinross.

The proportion of illegitimate births, 5·3 per cent., is 0·2 below that for the second quarter of 1950 and 0·7 below the average.

Of the 24,311 births registered, 12,550 were of male children and 11,761

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—These rates are calculated on the estimated population at 30th June 1951 based on the provisional figures of the population of Scotland as established by the census taken on the 8th April 1951. For the year 1950 the rates were calculated on an estimated home population which differs in its calculation from the Census population in including members of the Mercantile Marine abroad. Prior to the first quarter of 1950 the rates were variously calculated with reference either to what was referred to as a total population or as a civilian population.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the corresponding quarters of the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In Returns from 1941 to 1949 inclusive, classification was in accordance with the Fifth (1938) Revision.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

of female children, being 1,067 male births per 1,000 females. Births registered in April numbered 8,115, in May 8,463 and in June 7,733, the equivalent birth-rates being 19·3, 19·5 and 18·4 respectively.

Still-Births.—The number of still-births registered during the quarter was 655 and is equivalent to a rate of 26 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 8,951, is 266 more than for the second quarter of 1950. The rate per 1,000 population was 7·0. It was 0·3 above that for the corresponding quarter of 1950 but 1·0 below the five years' average. The rate in the aggregate of large burghs is 8·4 compared with 5·4 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 14·2 in Inverness, 13·7 in Rutherglen and 10·6 in Dumfries to 6·1 in Clydebank and in Port Glasgow, 5·7 in Coatbridge and 5·1 in Kirkealdy. In counties exclusive of large burghs it ranged from 7·3 in Wigtown, 7·2 in West Lothian and 7·0 in Bute to 3·8 in Kinross, 3·2 in Inverness and 2·1 in Sutherland.

Of the 8,951 marriages registered, 1,457 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 2 were irregular marriages registered on the authority of Decree of Declarator pronounced in the Court of Session. The remainder, 7,492, were solemnised by a minister of religion. In the corresponding quarter of 1950 civil marriages numbered 1,520 and those with a religious ceremony numbered 7,156.

Marriages registered in April numbered 4,191, in May 1,148 and in June 3,612, the equivalent marriage-rates being 10·0, 2·6 and 8·6 respectively.

Deaths.—Deaths registered during the quarter numbered 15,442, and equalled a death-rate of 12·1 per 1,000 population. They are 456 more than were registered in the second quarter of 1950. The rate is 0·5 more than in that quarter, and 0·3 more than the five years' average. The death-rate in the aggregate of large burghs is 11·9 compared with 12·4 in the rest of Scotland. The rate in individual large burghs ranged from 14·5 in Rutherglen, 14·2 in Dumfries and 13·7 in Kilmarnock to 9·5 in Greenock, 9·1 in Dunfermline and 9·0 in Airdrie. In counties exclusive of large burghs it ranged from 17·2 in Peebles, 16·4 in Orkney and 15·7 in Zetland to 10·6 in Midlothian, 10·2 in Kirkeudbright and 10·1 in West Lothian.

Deaths registered in April numbered 5,567, in May 5,188 and in June 4,687, the equivalent death-rates being 13·2, 11·9 and 11·2 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 850 and are equivalent to an infant mortality rate of 35 per 1,000 registered live births. This rate is 1 above that for the corresponding quarter of 1950 but 8 below the five years' average. Among legitimate children the mortality was 34 per 1,000 births and among illegitimate children 52.

The infant mortality for the large burghs was 36, while for the rest

of Scotland it was 34. In the large burghs individually it ranged from 58 in Coatbridge, 53 in Kilmarnock and 45 in Airdrie to 11 in Ayr, 10 in Arbroath and 8 in Dumbarton. In counties exclusive of large burghs it ranged from 70 in Bute, 67 in Wigtown and 54 in Dumfries to 16 in Caithness and in Roxburgh and 10 in Zetland. No deaths of children aged less than one year occurred in the Counties of Kinross, Nairn and Sutherland.

The neo-natal rate (deaths of infants under one month) was 22 per 1,000 live births and is 1 above that for the corresponding quarter of 1950.

Causes of Death.—*Principal Epidemic Diseases.*—There were 59 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 38 fewer than in the second quarter of 1950. The death-rate for this group is 5 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 9. These deaths include 1 from diphtheria, 18 from whooping-cough, 5 from cerebro-spinal fever, 14 from measles and 21 from influenza. There were no deaths from typhoid, paratyphoid or scarlet fever. In the large burghs the highest rates were 20 in Perth, 17 in Dumbarton and 16 in Kirkcaldy. In counties exclusive of large burghs the highest were 41 in Zetland, 29 in Sutherland, and 28 in Inverness.

Tuberculosis.—The 503 deaths from all forms of tuberculosis are 214 fewer than in the second quarter of 1950. Of them 421 were ascribed to tuberculosis of the respiratory system and 82 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 39 per 100,000, that from respiratory tuberculosis being 33. The former rate is 17 below that for the corresponding quarter of 1950 and the latter is 14 below. The rates from all forms and from the respiratory form are respectively 36 and 29 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,392 and equal a rate of 188 per 100,000. Allowing for change in classification introduced by the Sixth Revision of the International Lists of Diseases and Causes of Death these deaths are 36 fewer than in the second quarter of 1950. The rate is 1 below that quarter but 7 more than the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 421 and from pneumonia (including pneumonia of the newborn) 512. The corresponding death-rates per 100,000 population are 33 and 40. The average rates for the corresponding quarters of the previous five years are 32 and 39 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 26 and are equal to a rate of 1.1 per 1,000 live births. This rate is the same as that for the corresponding quarter of 1950 but 0.7 below the five years' average. Including still-births the maternal death-rate is 1.0 per 1,000.

Violence.—Deaths from violence numbered 691, and are equivalent to a death-rate of 54 per 100,000. In the second quarter of 1950 the number was 619 and the rate 48. Of the total deaths assigned to violence 125 were

attributed to road transport accidents, an increase of 3 compared with the corresponding quarter of 1950.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the second quarter of 1951 and in the corresponding quarter of 1950 with the average rates for the second quarter of the years 1946-1950.

CAUSE OF DEATH.	Death-rates per 100,000 Population.

NEW CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS

The number of new claims to Sickness Benefit under the National Insurance Acts made at local offices of the Ministry of National Insurance in Scotland during the 13 weeks ended 3rd July 1951, was 163,221. The number of such claims made at the sixteen principal towns is shown below:—

New Sickness Benefit Claims* in the 13 weeks ended 3rd July 1951.		New Sickness Benefit Claims* in the 13 weeks ended 3rd July 1951.	
Town.		Town.	
1. Glasgow . . .	45,319	9. Kirkcaldy . . .	2,180
2. Edinburgh . . .	13,454	10. Coatbridge . . .	2,477
3. Dundee . . .	7,234	11. Kilmarnock . . .	2,267
4. Aberdeen . . .	6,236	12. Hamilton . . .	2,653
5. Paisley . . .	4,060	13. Ayr . . .	2,354
6. Greenock . . .	3,075	14. Falkirk . . .	2,357
7. Motherwell and Wishaw . . .	4,385	15. Dunfermline . . .	2,200
8. Clydebank . . .	2,470	16. Perth . . .	1,932
			104,653

* These figures represent the number of new claims made at Ministry of National Insurance offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES**Supplied by the Meteorological Office, Edinburgh****APRIL 1951.**

The sixth successive cold month and the coldest April in Scotland since 1922. Sunshine records exceeded average but unsettled showery weather raised precipitation to well above average in most districts.

Persistently cold winds of northerly origin kept temperatures rather low throughout the greater part of the month. Mean temperatures were everywhere below average, the mean value (42.1° F.) for the whole country having a deficiency of about 2 degrees. The thermometer rose above 45° on most days and the average day temperature showed some advance as compared with March, but the highest day reading reached in Scotland was the moderate figure of 64° recorded on April 24th at Lundin Links, North Berwick and at the Royal Botanic Garden, Edinburgh, during the mild days of the 21st–25th. There were rather more frosts than normally occur in April but they were not on the whole severe. Glenmore Lodge, near Aviemore registered 16 and Glenlivet 14 degrees of frost on the morning of April 11th. Ground frosts were reported on most nights from some place in Scotland, the lowest readings being 12° F. (20 degrees of frost) at Dalwhinnie on the 11th and 8° F. (24 degrees of frost) at Glenlivet.

The weather was persistently showery until the 18th and after the 24th but the intervening period was dry in most districts. As in the preceding month there was again a good deal of snow and sleet. Apart from the extreme Southwest where there was a deficiency, totals in April showed a moderate to large excess practically everywhere. Some places round the Estuary of the Moray Firth had more than double the normal. During the present century only in 1910 and 1934 has more precipitation fallen in April at Inverness and Nairn. Falls of an inch or more in 24 hours were reported from many districts on the 3rd, 11th and 15th and several exceeded 2 inches, notably 2.28 and 2.25 in Glen Etive on the 3rd and 11th respectively and 2.16 at Carbost (Skye) on the former day.

Sunshine was abundant for the season over most of Scotland. South of a line drawn from Aberdeen to Tiree aggregates exceeded average by 20–40 hours. Tiree, Arbroath, Prestwick and Oban had their sunniest April for about ten years. There were a number of brilliantly sunny days, especially around the 13th and 21st and during the last week. At Edinburgh the sun shone for 13 hours on the 22nd. The leading totals were Tiree (212 hours), Benbecula (203), Arbroath (192), Prestwick (189) and Carnoustie (187). Aggregates exceeded 100 hours even in the duller places which included Fort William (128), Peebles (128) and Dalwhinnie (129).

More gales occurred than in any recent April and there was more than the normal frequency of thunder. Fog was reported on only seven days.

Meteorological Notes (*continued*).**MAY 1951.**

Mainly cool but dry sunny weather predominated. It was Scotland's coolest May since 1923 and some districts of the West and North had their driest May for many years. Only locally on the East Coast were sunshine aggregates about average. There was an excess of winds from an easterly point and North Sea haar was prevalent in East Scotland from the 22nd–26th.

In the Northwest, which had the best weather in May, temperature was about average for the time of year. Elsewhere the month was a cool one with mean temperatures mainly 1–2 degrees below average, the mean (47.5° F.) for the whole country showing a deficiency of 2.2°. The first week was the coolest and thereafter there was often a striking difference in temperature between eastern and western districts. In the East, where the 12th–14th and 31st were perhaps the mildest days, temperatures were seldom more than moderate. Observers in the West recorded their highest readings on the 19th–23rd and 31st. On the latter day which was fine and warm practically everywhere, shade temperature reached 72° at Glenmore Lodge and 71° at Achnashellach and Glenbranter. The coldest nights occurred in most areas from the 6th–11th when slight or keen frosts were experienced in many parts of the country. Air temperature fell to 21° F. at Glenlivet on the 7th and to 22° at Dalwhinnie on the 10th. The lowest ground readings—on the 7th—were 13° F. at Glenlivet and 15° at Dalwhinnie.

Most areas North of the Central Lowlands received less than half the normal rainfall. Shetland had its driest May for 40 years while Fort William and Glenquoich reported their smallest May rainfalls for about 75 years. To the South, there was a shortage of about 30 per cent. except in the extreme Southeast—where rainfall exceeded average. Little or no rain fell from the 3rd–18th and the closing days were dry everywhere. Lerwick and Stirling reported an "absolute drought." Most places had appreciable rain during the first week and also round the 20th and 24th. The largest daily measurements occurred on May 1st. In the Edinburgh area four observers recorded falls ranging from 1.27 to 1.43 inches for 24 hours and there was a fall of 1.39 inches at Old Graden, near Kelso, on the 27th.

Snow and sleet occurred in many districts on May 1st.

Owing to the prevalence of easterly winds and haar conditions from the 22nd–26th, sunshine totals were about or below average in parts of East Scotland. In other districts, however, sunshine was abundant especially in the Northwest where some records were 70–90 hours above average. Fort William had its sunniest month for about 20 years and at Tiree sunshine in May has been better in only two other years, viz. 1936 and 1946 when remarkable totals exceeding 300 hours were registered. There were many brilliantly sunny days especially in the first and second weeks and at the end of the month. At Dyce, near Aberdeen, a "possible duration" of just over 16 hours was recorded on May 31st. The sunniest places in May were Tiree (287 hours), Benbecula (275), Oban (268), Duntulm (265), Stornoway (254) and Fort William (254).

More than the usual frequency of fog occurred and winds rose to gale force on 7 days. Thunder was widespread in the South on the 2nd and outbreaks were reported from Angus, Fife and the Lothians on the 25th.

Meteorological Notes (continued).**JUNE 1951.**

Dry sunny weather prevailed during the first ten days. The fine spell broke up on the 11th with the onset of an unsettled southwest type and there was rain practically every day until the 20th. Showery weather followed with northwest winds but rising pressure gave a few fair days at the close.

The month was cooler than usual in most districts, deficiencies exceeding two degrees at Inverness, St. Andrews and Kelso. Day temperatures rose to 70°, chiefly in the West, from the 3rd–6th. On the 4th or 5th, 81° was registered in Glasgow, 79 at Ruthwell and Glenbranter and 78 at Rothesay, Helensburgh and Paisley. In June readings in the 80's can be expected in three years in four. During the past 50 years, the highest and lowest "extremes" for June were respectively 89° (in 1940 and 41) and 73° (in 1931). The coolest weather last month occurred on the 7th–10th but only the North and high level stations had maxima below 50°. Slight night frosts were registered in the North and East, the lowest minimum being 24° F. at Glenlivet on the 8th. (The corresponding ground reading was 15° F.) In only one other June, that of 1941, had temperature previously fallen to 24° in the screen in nearly 100 years of systematic recording.

Sunshine was abundant in most places, but aggregates were deficient in some East and coastal districts. The first ten days were the sunniest when the durations of sunshine averaged 12–13 hours daily at Benbecula and Duntuilum (Skye). The latter station had its sunniest June since records began in 1934. Many places have enjoyed only one sunnier June, that of 1949. Benbecula (264 hours) headed the lists of aggregates, followed by Tiree (256), Oban (248), Duntuilum (242) and Prestwick (238). The duller places included Dalwhinnie (146), Glensaugh, Kincardineshire (159), Braemar (160) and Lerwick (160).

It was dry at first in most districts but the weather broke on June 11th ending in places an "absolute drought" of 15 days or more. From the 11th–20th there was rain practically every day and frequent falls, mostly of the showery type, occurred until the 27th. The 20th was probably the wettest day in the West and the 25th in the East. On the latter date, 2.92 inches fell at Glenferness (Nairnshire), 2.88 at Keith and 2.28 at Dallas Lodge (Morayshire). For the month total rainfall exceeded average in some East Coast areas but over the greater part of Scotland it was deficient. In Border Counties and locally in the North there was roughly half the normal amount. At Wick and Dalwhinnie it was the driest June since 1941, at Marchmont (Berwickshire) the driest since 1942.

Gales occurred on only 2 days while there was about the average frequency of fog. Widespread thunderstorms broke out on the 12th, 17th and 25th.

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGH OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 30TH JUNE 1951.

Note.—Sub-headings indicated by numbers (1, 2, 3, etc.), correspond with those in the International List. Those indicated by letters (a, b, c, etc.), apply to the Scottish List only.

TABLE III.—continued.

INTERNATIONAL CLASSIFICATION (DETAILED LIST)																
	All Ages			Age												
	Both Sexes	Males	Females	-1	1-4	5-9	10-	15-	25-	35-	45-	55-	65-	75-	85 +	Not Stated
201 Hodgkin's disease - - - - -	26	15	11	3	4	5	3	5	3	2	1	-
204 Leukaemia and aleukaemia - - - - -	49	23	26	...	4	2	2	6	1	6	6	9	11	2	...	-
202, 203, 205 Other neoplasms of lymphatic and haematopoietic tissues - - - - -	21	8	13	1	1	2	3	8	5	1	...	-
<i>Benign Neoplasms:—</i>																
214, 215 Uterus - - - - -	4	...	4	1	1	2	-
216 Ovaries - - - - -	7	...	7	3	2	...	-
217 Other female genital organs - - - - -	-
219a Bladder - - - - -	1	1	1	-
219b Other urinary organs - - - - -	-
223 Brain and nervous system - - - - -	3	2	1	1	2	-
210-213, 218, 220-222, 224-229 Other unspecified organs - - - - -	-
<i>Neoplasms of Unspecified Nature—</i>																
233 Uterus - - - - -	-
234 Ovary - - - - -	1	...	1	1	-
235 Other female genital organs - - - - -	-
236a Bladder - - - - -	1	1	1	-
236b Other genito-urinary organs - - - - -	2	2	1	1	-
237 Brain and nervous system - - - - -	24	10	14	1	1	1	1	...	5	2	6	7	1	1	...	-
230-232, 238, 239 Other and unspecified organs - - - - -	24	15	9	1	1	2	5	9	3	3	-
III. ALLERGIC, ENDOCRINE SYSTEM, METABOLIC AND NUTRITIONAL DISEASES																
<i>Allergic Disorders—</i>																
241 Asthma - - - - -	67	37	30	2	2	4	4	14	12	20	9	...	-
240 Other allergic disorders - - - - -	-
<i>Diseases of Thyroid Gland—</i>																
252 Thyrotoxicosis - - - - -	9	...	9	1	1	1	3	3	-
253 Myxoedema and cretinism - - - - -	9	2	7	2	1	1	...	4	-

Quarterly Return

of the

Births, Deaths and Marriages registered in Scotland
for the Quarter ended 30th September 1951

REPORT

Summary.—The birth-rate in the third quarter of 1951, while lower than the average of corresponding quarters in previous years, approximates closely to rates recorded in the years immediately prior to the war.

The marriage-rate is below the average of recent years.

The death-rate differs little from the average of the past five years.

The infant mortality rate is the lowest recorded in Scotland for any quarter.

The death-rate from tuberculosis shows a substantial improvement, principally in the respiratory form.

Live Births.—The 21,928 births in the quarter under review are 570 fewer than in the corresponding quarter of 1950. The rate per 1,000 population is 17.0, being 0.3 below the rate for the corresponding quarter of 1950 and 2.1 below the average. The birth-rate in the aggregate of large burghs is 17.1 as compared with 16.9 for the rest of Scotland. In individual areas the rate ranged in burghs from 23.4 in Coatbridge, 22.7 in Port Glasgow and 22.6 in Clydebank to 14.8 in Stirling, 14.2 in Rutherglen and 13.5 in Falkirk. In counties exclusive of large burghs it ranged from 20.0 in Inverness, 19.5 in Midlothian and 19.0 in Sutherland to 13.8 in Selkirk, 12.7 in Roxburgh and 11.0 in Bute.

The proportion of illegitimate births, 5.1 per cent., is 0.2 below that for the third quarter of 1950 and 0.7 below the average.

Of the 21,928 births registered, 11,184 were of male children and 10,744 of female children, being 1,041 male births per 1,000 females. Births regis-

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—These rates are calculated on the estimated population in Scotland at 30th September 1951.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the corresponding quarters of the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In Returns from 1941 to 1949 inclusive, classification was in accordance with the Fifth (1938) Revision.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

tered in July numbered 7,783, in August 7,454 and in September 6,691, the equivalent birth-rates being 17·9, 17·2 and 15·9 respectively.

Still-Births.—The number of still-births registered during the quarter was 571 and is equivalent to a rate of 25 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 12,048, is 194 more than for the third quarter of 1950. The rate per 1,000 population was 9·3. It is 0·2 above that for the corresponding quarter of 1950 but 0·5 below the average. The rate in the aggregate of large burghs is 11·1 compared with 7·3 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 16·2 in Inverness, 15·3 in Perth and 13·9 in Rutherglen to 7·8 in Clydebank, 7·0 in Dumbarton and 4·5 in Port Glasgow. In counties exclusive of large burghs it ranged from 9·4 in West Lothian, 9·0 in Caithness and 8·7 in Moray to 5·0 in Nairn, 4·0 in Ross and Cromarty and in Sutherland and 3·1 in Inverness.

Of the 12,048 marriages registered, 1,734 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939. The remainder, 10,314, were solemnised by a minister of religion. In the corresponding quarter of 1950 civil marriages numbered 1922 and those with a religious ceremony numbered 9,922.

Marriages registered in July numbered 4,516, in August 3,620 and in September 3,912, the equivalent marriage-rates being 10·4, 8·3 and 9·3 respectively.

Deaths.—Deaths registered during the quarter numbered 13,102, and equalled a death-rate of 10·2 per 1,000 population. They are 239 fewer than were registered in the third quarter of 1950. The rate is the same as in that quarter, but 0·1 below the average. The death-rate in the aggregate of large burghs is 10·1 compared with 10·2 in the rest of Scotland. The rate in individual large burghs ranged from 13·2 in Stirling, 12·0 in Dumfries and 11·5 in Inverness and in Kirkcaldy to 8·9 in Coatbridge, 8·6 in Rutherglen and 6·9 in Dunfermline. In counties exclusive of large burghs it ranged from 15·9 in Zetland, 15·1 in Caithness and 15·0 in Sutherland to 8·6 in Clackmannan, 8·3 in West Lothian and 7·7 in East Lothian.

Deaths registered in July numbered 4,479, in August 4,449 and in September 4,174, the equivalent death-rates being 10·3, 10·2 and 9·9 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 698 and are equivalent to an infant mortality rate of 32 per 1,000 registered live births. This rate is 1 below that for the corresponding quarter of 1950 and 9 below the five years' average. Among legitimate children the mortality was 31 per 1,000 births and among illegitimate children 41.

The infant mortality for the large burghs was 34, while for the rest of

Scotland it was 30. In the large burghs individually it ranged from 63 in Dumfries, 61 in Airdrie and 59 in Stirling to 13 in Aberdeen, 6 in Perth and 5 in Ayr. No deaths of children aged less than one year occurred in the burgh of Rutherglen. In counties exclusive of large burghs it ranged from 111 in Bute, 92 in Selkirk and 62 in Berwick to 14 in Roxburgh and in Zetland and 10 in Angus. No deaths of children aged less than one year occurred in the counties of Inverness, Kinross, Nairn and Orkney.

The neo-natal rate (deaths of infants under one month) was 21 per 1,000 live births and is 1 below that for the corresponding quarter of 1950.

Causes of Death.—Principal Epidemic Diseases.—There were 40 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 4 more than in the third quarter of 1950. The death-rate for this group is 3 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 4. These deaths include 16 from whooping-cough, 9 from cerebro-spinal fever, 1 from measles and 14 from influenza. There were no deaths from typhoid fever, scarlet fever or diphtheria. In the large burghs the highest rates were 20 in Hamilton, 8 in Kirkcaldy and in Coatbridge and 6 in Motherwell and Wishaw. In counties exclusive of large burghs the highest were 37 in Orkney, 26 in Peebles and 14 in Kincardine.

Tuberculosis.—The 468 deaths from all forms of tuberculosis are 96 fewer than in the third quarter of 1950. Of them 370 were ascribed to tuberculosis of the respiratory system and 98 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 36 per 100,000, that from respiratory tuberculosis being 29. The former rate is 7 below that for the corresponding quarter of 1950 and the latter is 8 below. The rates from all forms and from the respiratory form are respectively 25 and 22 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,316 and equal a rate of 180 per 100,000. Allowing for change in classification introduced by the Sixth Revision of the International Lists of Diseases and Causes of Death these deaths are 110 fewer than in the third quarter of 1950. The rate is 6 below that quarter and 2 below the average.

Respiratory Diseases.—Deaths from bronchitis numbered 222 and from pneumonia (including pneumonia of the newborn) 343. The corresponding death-rates per 100,000 population are 17 and 27. The average rates for the corresponding quarters of the previous five years are 19 and 28 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 20 and are equal to a rate of 0.9 per 1,000 live births. This rate is 0.6 below that for the corresponding quarter of 1950 and 0.7 below the five years' average. Including still-births the maternal death-rate is also 0.9 per 1,000.

Violence.—Deaths from violence numbered 625, and are equivalent to a death-rate of 48 per 100,000. In the third quarter of 1950 the number was 646 and the rate 50. Of the total deaths assigned to violence 163 were attributed to road transport accidents, an increase of 13 compared with the corresponding quarter of 1950.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the third quarter of 1951 and in the corresponding quarter of 1950 with the average rates for the third quarter of the years 1946-1950.

CAUSE OF DEATH.	Death-rates per 100,000 Population.

NEW CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS

The number of new claims to Sickness Benefit under the National Insurance Acts made at local offices of the Ministry of National Insurance in Scotland during the 13 weeks ended 2nd October 1951, was 141,963. The number of such claims made at the sixteen principal towns is shown below:—

New Sickness Benefit Claims*			New Sickness Benefit Claims*		
in the 13 weeks ended			in the 13 weeks ended		
Town.	2nd Oct. 1951.		Town.	2nd Oct. 1951.	
1. Glasgow . . .	38,779		9. Kirkcaldy . . .	1,713	
2. Edinburgh . .	12,040		10. Coatbridge . .	2,242

* These figures represent the number of new claims made at Ministry of National Insurance offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES**Supplied by the Meteorological Office, Edinburgh****JULY 1951.**

Temperature in July maintained a moderately high level, the mean value for Scotland being above average for the first time since November 1950. The month was duller than usual though parts of East Scotland had abundant sunshine. On the whole rainfall showed a considerable excess due largely to thundery downpours.

In a broad sense mean temperature exceeded average in East Scotland, but the West was rather cool for the time of year. Around the 10th–14th day maxima of 50–55° were widely recorded and at no time in the month did temperature exceed 60° at Lerwick or 63° at Tiree. Night minima fell to 40° or below in many areas on the 5th, 14th and 30th. On the 14th a screen minimum of 31° F. was reported from Dalwhinnie. This is the lowest July reading in Scotland since 1929. There were many pleasantly mild days, however, the period 16th–22nd being the mildest, when over large areas maxima occasionally rose above 70°. Dundee with 79° on the 19th had the highest reading. Two places, Stonehaven and Dyce, reported 77° on the 16th, while Carnoustie had 77° on the 19th.

Though cloudy weather predominated, several short sunny spells occurred, the third and last weeks being the brightest. Except in East Scotland where sunshine was abundant, aggregates were mainly below average, the northwest being particularly unfortunate. At Tiree it was the dullest July since 1928 and only in 1939 has Skye had so little sunshine in July. Leuchars, with 217 hours, had its best July record since 1935 and was the sunniest place in Scotland. St. Andrews (215 hours) followed closely while other good records were Carnoustie (207), Arbroath (205) and Glensaugh, near Fettercairn (199). Amongst the dullest places were Duntuilin (81), Fort William (85), Lerwick (85), Benmore (90) and Stornoway (92).

Rainfall in July was mainly of the thundery type and, in consequence, rather variable. Thus Prestwick and Dumfries had their driest July since 1935 whereas at Lerwick and Loch Leven it was the wettest since that year. Locally in Kinross-shire and Aberdeenshire totals were about double the average and many other areas had a considerable excess. Only in the south-west and locally elsewhere was there a shortage. Most of the rain fell on the 5th–12th and 22nd–27th. Heavy downpours which resulted from thunderstorms on the 12th and 22nd caused flooding and damage in many localities. It was reported that an inch of rain fell in half an hour in Dundee on the 12th. Measurements for 24 hours amounted to 2·81 inches at Preston Gardens (Linlithgow), 2·70 inches at Davidson's Mains (Edinburgh), 2·52 at Lothrie Reservoir (Fife) and 2·52 at Torphichen—all on the 22nd. On the 26th 2·62 inches was measured at Kinlochquoich.

Thunderstorms occurred on 15 days. Only one station reported a gale but fog was rather prevalent for the season.

Meteorological Notes (continued).**AUGUST 1951.**

The month was cool and very unsettled with persistent rain. The wet weather delayed the harvest in many parts of the country. It was furthermore exceedingly dull, only two stations—Tiree and St. Andrews—having more than the usual August sunshine.

August opened with a week of mild weather in which day readings exceeded 70° over a wide area. On the 4th or 5th temperature rose to 75° in Perth and to 73° at Paisley, Midcalder and Lauder. Several Edinburgh districts, Glasgow, Renfrew, Kelso, Dunfermline and Ruthwell had 72° on the 4th. The thermometer dropped in places by as much as 20° F. during a period of cold northerly winds from the 10th–16th. At Glenmore Lodge, near Aviemore, the maximum on the 13th was only 48°. Another cool period occurred on the 25th–28th. Night minima fell to freezing at Glenmore Lodge and Balmoral on the 28th while Dalwhinnie had 2 degrees of frost on both the 10th and 16th. On the ground the lowest minima were 22° F. at Dalwhinnie on the 10th and 23° F. at Glenlivet on the 27th and 28th.

The western fringe, the Islands and some Clyde, Tay and Tweed stations had less than the normal rainfall. Elsewhere totals showed a moderate excess. Edinburgh and Inverness districts had more than 150 per cent. of average. A total of 5.33 inches for the month gave Lerwick its wettest August for 40 years. East and Central Scotland reported the largest falls for 24 hours, the 6th, 7th and 11th being by far the wettest days. In western districts the 2nd, 18th and 25th were perhaps the worst days. On the 7th, 2.38 inches fell at Glenmore Lodge and on that day intense rains fell in Nairnshire, Auchindoune receiving 2.51 inches, Lethen 2.37 and Cawdor Castle 2.08 inches.

Patches of snow from last winter were still visible in Ross-shire on the hills around Loch Gorm in the Tollamuick Forest on August 22nd and also on Liathach and Ben Eighe on August 31st.

Cloudy weather alternated with fair intervals throughout the month. Only four observers recorded aggregates exceeding 150 hours, the sunniest places being Benbecula (179 hours), Tiree (168), Leuchars (155) and St. Andrews (151). Rattray Head and Prestwick had each 150 hours. The dullest place was Fort William with 63 hours, the lowest August total at this station since 1934. Other poor records were Dalwhinnie (70), Benmore, Argyll (74) and Onich (81).

Winds rose to gale force at times from the 18th to 25th. There was less than the usual frequency of fog. Thunderstorms on the 27th and 29th occurred over rather a wide area.

Meteorological Notes (*continued*).**SEPTEMBER 1951.**

Rather mild weather prevailed in September but there was a very cool period from the 16th–23rd with slight frost in some areas. The month was considerably drier than usual in East Scotland and there was a substantial excess of sunshine except in some districts of West Scotland.

Mean temperatures were above average by 1 or 2 degrees in most areas and the mean value for the whole country (54.8° F.) showed an excess of 1.5 degrees. During the mild days about the middle of the first week shade maxima of 70° or above were widely recorded, the highest being 73° on the 4th at Banff, Kirkcaldy, Edinburgh, North Berwick and Dunbar and 72° at Gordon Castle, Leuchars, Falkirk and Midcalder. In the cool spell on the 16th–23rd day readings rose little above 50° in places while air and ground frosts were experienced at night. On the 20th Glenlivet registered 28° in the screen and 19° on the ground. The corresponding readings at Dalwhinnie were 30° and 24° .

September was an exceedingly dry month in East Scotland and moderately dry over much of the West. The wet areas were Argyll, some Clyde districts and parts of the Southwest. Total precipitation was less than an inch in the drier regions of the East, many stations having less than one quarter of their normal rainfall. Nairn with only 0.54 inch experienced its driest September since 1884, and Edinburgh its driest since 1929. In contrast, totals reached 10 inches locally in the West. Most of the rain fell on the 1st–4th, 10th–15th and in the last week. The 14th and 24th were the wettest days, falls of an inch or more being numerous. On the 14th, 2.35 inches fell at Fort William while Auchen Castle, near Moffat, had 2.06 inches on the 24th.

The contrast in sunshine between East and West Scotland was quite marked. Aggregates in some western districts were 10–20 hours short of normal, whereas there was mainly an excess to the east. Nairn and Forres had their sunniest September since 1933 or 1934 while in Edinburgh there have been only three sunnier Septembers since the beginning of the present century. The best records were 166 hours at the Royal Botanic Garden, Edinburgh, 164 at Dunbar, 160 at Kirkcaldy and Blackford Hill, Edinburgh, 157 at Arbroath and 156 at Leuchars. Amongst the dullest places were Benmore, Argyll (74 hours), Fort William (84), Onich (92), Duntuilin, Skye (94) and Benbecula (95).

There was a good deal of fog but only a few strong gales. Thunder was more frequent than is usual in September. Widespread storms broke out on the 13th and 14th.

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGH OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 30TH SEPTEMBER 1951.

* Typhoid fever, cerebro-spinal fever, scarlet fever, whooping-cough, diphtheria, influenza and measles.

Preliminary Return for the year 1951

THIS Report deals primarily with the statistics for the fourth quarter of the year 1951 but includes a short preliminary return of the general vital statistics for the country for the whole year. A full report of the vital statistics of the year will in due course be incorporated in the Ninety-Seventh Annual Report. The figures given for the year in the present Report, may, however, be accepted as substantially accurate, although they are provisional and will be superseded in due course by those appearing in the Annual Report.

The birth-rate is the lowest since the war, but is the same as the average over the period 1935-1939. The general death-rate is higher than in 1950 and a little above the average. The infant death-rate and the neo-natal rate are the lowest recorded. The marriage-rate is higher than in 1950 and above the pre-war average (1934-38).

Deaths from tuberculosis show a definite downward trend from both pulmonary and non-pulmonary forms of the disease. There is a marked improvement in the death-rate from pulmonary tuberculosis which is the lowest recorded. The rate for non-pulmonary tuberculosis has been improving steadily since 1943.

Live births registered during the year 1951 numbered 90,635, being equal to a rate of 17·7 per thousand. This rate is 0·2 below that for 1950 and 1·9 below the average for the five preceding years. It was 17·7 in 1938, 18·5 in 1944, 16·9 in 1945, 20·3 in 1946, 22·0 in 1947, 19·4 in 1948, 18·5 in 1949 and 17·9 in 1950. The natural increase for the year, i.e. the excess of births over deaths, was 24,857 as compared with the average for the previous five years of 37,368. Still-births numbered 2,470 as compared with 2,557 in 1950, representing a rate of 27 still-births per 1,000 of all births (live and still), the same as that in 1950. Illegitimate live births numbered 4,592 as compared with 4,837 in 1950. This is equal to a rate of 5·1 per 100 live births. The proportion of male live births per 1,000 female was 1,063, being 7 less than in 1950.

Marriages registered during the year numbered 41,368. The marriage-rate, 8·1 per thousand, is 0·3 above that for 1950. It is 0·3 below the five years' average (1946-50) but 0·5 above the pre-war average (1934-38). 34,438 of the marriages were solemnised by ministers of religion, 34,249 having been preceded by proclamation of banns or by publication of notice, and 189 authorised by Sheriff's licence in accordance with the provisions of the Marriage (Scotland) Act, 1939. 6,927 marriages were contracted in the offices of authorised Registrars. 3 were registered on the authority of Decree of Declarator pronounced in the Court of Session. Civil marriages comprise 16·7 per cent. of the total marriages.

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—These rates are calculated on the estimated population in Scotland, or of the local area concerned, as the case may be.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In Returns from 1941 to 1949 inclusive, classification was in accordance with the Fifth (1938) Revision.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

Deaths from all causes numbered 65,778 and equalled a death-rate of 12·9 per thousand. It is 0·5 above the rate for 1950 and 0·5 above the five years' average.

Deaths of children under one year numbered 3,391, representing an infant mortality rate of 37 per thousand live births. This rate is 2 below that for 1950 and 10 below the five years' average. It is the lowest Scottish infant mortality rate yet recorded. The neo-natal rate (deaths of infants under one month) was 22 per thousand, 1 below the rate for 1950. It is also the lowest rate recorded for Scotland. Among legitimate children the infant mortality rate was 37 per thousand, 1 less than in 1950, while among illegitimate children it was 54, the same as in 1950.

Table IIA shows the total number of deaths registered in Scotland during the year, classified by sex and cause, and also the number by age and cause.

Except for an increase in the age-group 5–9, in which the numbers, however, are very small, the deaths in all age-groups up to and including 35–44 show a decrease on the previous year. The total deaths were slightly more in number than in 1950 and this was almost wholly due to increases in the age-groups after 35–44.

The greatest relative decrease is found in the age-groups 15–24 and 25–34. The increase in the age-group 5–9 is relatively the highest but, as previously indicated, the numbers are small. The groups showing the next highest proportionate increases are 85 and over and 75–84.

In 1951 the death-rate at ages under 44 was 2·7 per 1,000, and at ages over 44, 33·4. In 1950 the corresponding rates were 2·9 and 32·2.

The number of deaths from the principal epidemic diseases* was 1,132, 605 more than in 1950. The death-rate was 22 per 100,000. The large increase was principally due to the number of deaths from influenza which was 958 compared with 386 in 1950. Deaths from diphtheria totalled 5; the smallest number ever registered in Scotland was 3 in 1950. In 1940 the number was 676 and in 1941, 517. Deaths from scarlet fever numbered 1, being the lowest recorded figure. From cerebro-spinal fever the number was 44, an increase of 9 compared with the previous year, and from whooping-cough the number was 98 against 61 in 1950. The deaths from acute poliomyelitis and polio-encephalitis numbered 24, a decrease of 40 from the previous year. In 1947 the number was 129. The average for the years 1942–46 was 13. One death occurred from typhoid fever in 1951. There were no deaths in 1950.

Deaths from tuberculosis (all forms) numbered 2,180, a decrease of 595 compared with 1950. The death-rate is 43 per 100,000, being 28 below the average of the preceding five years. Deaths from respiratory tuberculosis numbered 1,885, being 554 fewer than in 1950. The rate was 37 per 100,000, being 23 below the five years' average. The deaths from non-respiratory tuberculosis were 41 fewer than in 1950. The rate 6 per 100,000 was 4 below the five years' average.

Deaths from syphilis (including parasyphilitic diseases) numbered 149, a decrease of 21 compared with the previous year.

Deaths from malignant disease numbered 9,820 and were 209 less than in 1950. Compared with the average they were 346 more.

Deaths from heart disease numbered 21,503 and were 1,200 more than in 1950. They account for 33 per cent. of all deaths. This is the largest number of deaths ever recorded from heart disease.

From cerebral hæmorrhage and allied conditions deaths numbered 9,120, from nephritis 650 and from old age 1,292.

* See note on page 2.

Deaths from diseases of the respiratory system (not tubercular, malignant or influenzal) numbered 5,444, which were 436 more than in 1950. They included 2,487 from bronchitis and 2,297 from pneumonia, the rates per 100,000 being 49 and 45 respectively. Compared with 1950 the number from bronchitis was 228 more and from pneumonia 180 more.

Deaths from diseases and accidents of pregnancy and childbirth numbered 98 as against 106 in the previous year. This represents a maternal mortality rate of 1.1 per thousand births (live and still). This rate is the same as that for 1950. It is 0.6 below the five years' average. The rate is less than half that experienced as recently as 1945.

Deaths from congenital debility and diseases of early infancy numbered 2,319 and were 94 less than in 1950.

Deaths attributed to violent causes numbered 2,584 and are 14 fewer than in 1950. Of these 277 were ascribed to suicide, 564 to road transport accidents and 1,743 to other forms of violence; the numbers from these causes in 1950 were 269, 530 and 1,799 respectively.

In Table IA will be found the main figures and rates for Scotland, Large Burghs and Remainder of Counties, with individual figures for each Large Burgh.

Quarterly Return of the Births, Deaths and Marriages registered in Scotland for the Quarter ended 31st December 1951

REPORT

Summary.—The birth-rate in the fourth quarter of 1951 is lower than any experienced since 1940.

The marriage-rate was lower than in recent years.

The death-rate is considerably below the average of the past five years.

The infant mortality-rate is the lowest recorded in Scotland for any fourth quarter.

The death-rates from respiratory and non-respiratory tuberculosis continue to show improvement, especially in the respiratory form which is considerably below the average.

Live Births.—The 20,769 births in the quarter under review are 1,075 fewer than in the corresponding quarter of 1950. The rate per 1,000 population is 16.1, being 0.7 below the rate for the corresponding quarter of 1950 and 2.8 below the average. The birth-rate in the aggregate of large burghs is 15.9 as compared with 16.3 for the rest of Scotland. In individual areas the rate ranged in burghs from 21.6 in Coatbridge, 21.4 in Clydebank and 20.9 in Airdrie to 13.7 in Edinburgh, 13.5 in Perth and 13.0 in Ayr. In counties exclusive of large burghs it ranged from 18.9 in Clackmannan, 18.7 in Midlothian and 18.6 in West Lothian to 13.2 in Argyll, 12.0 in Bute and 11.8 in Berwick.

The proportion of illegitimate births, 4.7 per cent., is 0.3 below that for the fourth quarter of 1950 and 0.5 below the average.

Of the 20,769 births registered, 10,819 were of male children and 9,950

of female children, being 1,087 male births per 1,000 females. Births registered in October numbered 7,132, in November 6,546 and in December 7,091 the equivalent birth-rates being 16·4, 15·6 and 16·3 respectively.

Still-Births.—The number of still-births registered during the quarter was 587 and is equivalent to a rate of 27 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 8,800, is 26 less than for the fourth quarter of 1950. The rate per 1,000 population was 6·8. It is the same as that for the corresponding quarter of 1950 but 0·9 below the five years' average. The rate in the aggregate of large burghs is 7·7 compared with 5·8 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 15·6 in Inverness, 11·0 in Perth and 9·2 in Kirkcaldy to 6·5 in Port Glasgow, 6·4 in Airdrie and 6·1 in Clydebank. In counties exclusive of large burghs it ranged from 7·9 in Wigtown, 7·6 in Kinross and 7·1 in Bute to 4·3 in Ross and Cromarty, 3·6 in Peebles and 3·5 in Inverness.

Of the 8,800 marriages registered, 1,714 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939. The remainder, 7,086, were solemnised by a minister of religion. In the corresponding quarter of 1950 civil marriages numbered 1,772 and those with a religious ceremony numbered 7,054.

Marriages registered in October numbered 2,849, in November 2,062 and in December 3,889, the equivalent marriage-rates being 6·6, 4·9 and 9·0 respectively.

Deaths.—Deaths registered during the quarter numbered 14,804, and equalled a death-rate of 11·5 per 1,000 population. They are 2,218 fewer than were registered in the corresponding quarter of 1950. The rate is 1·6 less than in that quarter, and 0·9 below the five years' average. The death-rate in the aggregate of large burghs is 11·8 compared with 11·1 in the rest of Scotland. The rate in individual large burghs ranged from 13·2 in Rutherglen, 12·7 in Edinburgh and 12·6 in Clydebank to 9·1 in Dumfries, 8·7 in Kilmarnock and 8·3 in Port Glasgow. In counties exclusive of large burghs it ranged from 17·0 in Bute, 16·9 in Sutherland and 16·4 in Peebles to 9·6 in Midlothian, 8·7 in Moray and in West Lothian and 8·6 in Nairn.

Deaths registered in October numbered 4,791, in November 4,766 and in December 5,247, the equivalent death-rates being 11·0, 11·3 and 12·1 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 755 and are equivalent to an infant mortality rate of 36 per 1,000 registered live births. This rate is 6 below that for the corresponding quarter of 1950 and 13 below the five years' average. Among legitimate children the mortality was 36 per 1,000 births and among illegitimate children 51.

The infant mortality for the large burghs was 38, while for the rest of Scotland it was 34. In the large burghs individually it ranged from 62 in Falkirk, 48 in Paisley and 47 in Dunfermline to 14 in Ayr, 13 in Kilmarnock and 10 in Rutherglen. In counties exclusive of large burghs it ranged from 77 in Peebles, 58 in Inverness and 53 in Bute to 13 in Selkirk, 12 in Roxburgh and 10 in Kincardine. No deaths of children aged less than one year occurred in the County of Nairn.

The neo-natal rate (deaths of infants under one month) was 21 per 1,000 live births and is 4 below that for the corresponding quarter of 1950.

Causes of Death.—Principal Epidemic Diseases.—There were 45 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 53 fewer than in the fourth quarter of 1950. The death-rate for this group is 3 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 8. These deaths include 1 from scarlet fever, 2 from diphtheria, 11 from whooping-cough, 7 from cerebro-spinal fever, 2 from measles and 22 from influenza. There were no deaths from typhoid fever. In the large burghs the highest rates were 25 in Coatbridge, 18 in Port Glasgow and 16 in Rutherglen. In counties exclusive of large burghs the highest were 21 in Zetland, 16 in Berwick and 14 in Kincardine.

In addition to the deaths mentioned above, 10 deaths were registered from acute poliomyelitis. There were 8 deaths from this cause in the previous quarter and 16 in the corresponding quarter of 1950. In the third quarter of 1947 when the disease was prevalent 84 deaths were recorded.

Tuberculosis.—The 483 deaths from all forms of tuberculosis are 186 fewer than in the fourth quarter of 1950. Of them 428 were ascribed to tuberculosis of the respiratory system and 55 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 37 per 100,000, that from respiratory tuberculosis being 33. The former rate is 14 below that for the corresponding quarter of 1950 and the latter is 13 below. The rates from all forms and from the respiratory form are respectively 32 and 28 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,501 and equal a rate of 194 per 100,000. These deaths are 77 fewer than in the fourth quarter of 1950. The rate is 4 below that quarter. Allowing for change in classification introduced by the Sixth Revision of the International Lists of Diseases and Causes of Death. The rate is 4 above the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 379 and from pneumonia (including pneumonia of the newborn) 469. The corresponding death-rates per 100,000 population are 29 and 36. The average rates for the corresponding quarters of the previous five years are 47 and 49 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 21 and are equal to a rate of 1.0 per 1,000 live births. This rate is 0.1 below that for the corresponding quarter of 1950 and 0.6 below the five years' average. Including still-births the maternal death-rate is also 1.0 per 1,000.

Violence.—Deaths from violence numbered 564, and are equivalent to a death-rate of 44 per 100,000. In the fourth quarter of 1950 the number was 685 and the rate 53. Of the total deaths assigned to violence 140 were attributed to road transport accidents, an increase of 14 compared with the corresponding quarter of 1950.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the fourth quarter of 1951 and in the corresponding quarter of 1950 with the average rates for the quarter of the years 1946-1950.

CAUSE OF DEATH.	Death-rates per 100,000 Population.		
	1951 Fourth Quarter.	1950 Fourth Quarter	Average rates for Fourth Quarters 1946-1950.

NEW CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS

The number of new claims to Sickness Benefit under the National Insurance Acts made at local offices of the Ministry of National Insurance in Scotland during the 13 weeks ended 1st January 1952 was 180,273. The number of such claims made at the sixteen principal towns is shown below.

New Sickness Benefit Claims* in the 13 weeks ended 1st Jan. 1952.		New Sickness Benefit Claims* in the 13 weeks ended 1st Jan. 1952.	
Town.		Town.	
1. Glasgow . . .	49,786	9. Kirkcaldy . . .	2,339
2. Edinburgh . . .	16,484	10. Coatbridge . . .	2,813
3. Dundee . . .	7,983	11. Kilmarnock . . .	2,354
4. Aberdeen . . .	7,203	12. Hamilton . . .	2,857
5. Paisley . . .	4,280	13. Ayr . . .	2,656
6. Greenock . . .	3,536	14. Falkirk . . .	2,732
7. Motherwell and Wishaw . . .	4,864	15. Dunfermline . . .	2,740
8. Clydebank . . .	2,857	16. Perth . . .	2,139
			<u>117,623</u>

* These figures represent the number of new claims made at Ministry of National Insurance offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES

Supplied by the Meteorological Office, Edinburgh

OCTOBER 1951.

October was the driest month in Scotland since August 1947, and it was also, with one exception, the driest October since 1877. In addition, it was a very mild month, though there was a very cold period from the 21st-26th. Sunshine was about average for the time of year.

For the first two weeks, most of the country came under the influence of an anticyclone over Northern Europe and there was little rainfall except occasionally in the North and West. Disturbances crossed the country later in the month, but rainfall was mainly light in Eastern districts. In the latter area, totals for the month were about one-fifth of average, while the South-East and Border districts had even less. There was a moderate deficiency towards the West and only in Skye was rainfall in excess, largely because of heavy downpours on the 9th. Numerous observers recorded less than half-an-inch of rain for the whole month. In places, it was the driest October on record. Edinburgh had its lowest October fall since 1830. Several falls of an inch or more in 24 hours occurred in the West and North on the 9th, 15th and 19th, the largest being 1.94 at Loch Harport, 1.89 at Grula (Loch Eynort) and 1.73 at Duntuiln, all on the 9th.

More than the average sunshine was recorded in the regions South of the Central Lowlands, and also locally in Glen More and round the Moray Firth. The sunniest periods were probably the first and fourth weeks. On the 2nd the sun shone for 10 hours at Stornoway. Balerno, near Edinburgh (129 hours), and Blackford Hill, Edinburgh (117), had the highest aggregates while other good records were Turnberry (113), Davidson's Mains, Edinburgh (112), Glenmore Lodge (112), Nairn (112) and Dunbar (111). The month was the sunniest October in Edinburgh for 20 years.

October was mild for the season in all districts, and the mean temperature (50.1°F . for the whole country) was about 2° above average. The first part of the month was the mildest, the 16th being the warmest day when shade readings rose to 69° at Nairn, 68 at Gordon Castle and Peebles and 67 at Strathly and Kinloss. A very cold period began on the 21st and snow and sleet showers occurred during the next few days. Day maxima fell to $40-45^{\circ}$ and even lower in places, especially on the 22nd. The lowest screen minima—on the 22nd/23rd—were 19° at Peebles and 20° at Eskdalemuir. On the ground, temperature fell to 14° at Glenlivet and to 15° at Glenmore Lodge.

Thunderstorms occurred in a number of places in Ayrshire on October 20th. The frequency of high winds and of fog was about average for October. During gales in the North and West on the 9th, gusts rose at times to about 60 miles per hour.

Meteorological Notes (continued).**NOVEMBER 1951.**

November's weather was almost continually unsettled, and sometimes of a wild type. The month was unusually mild and, most striking of all, exceedingly wet. Poor visibility, high winds and frequent snow showers during the last ten days added to the general unpleasantness of the month.

With winds mainly from a southerly point throughout the first three weeks, temperatures—especially at night—were high for the season but dropped considerably during a spell of west to north-west winds which set in on the 22nd. For the month, mean temperature (45.5°F.) was 3.7° above average. It was thus the mildest November in Scotland since 1938. Indeed, there have been only three milder Novembers in a period of nearly 100 years. Maxima of $55-60^{\circ}$ were widely recorded until the 22nd, the thermometer rising to 60° in Kirkcaldy on the 17th and to 59° at Falkirk on the 6th. The coldest period was the 22nd-26th but only high level stations registered very low readings. In the lowlands many places had no air frost at all, for example at Nairn where, notably, this was the first November for many years in which screen temperature did not fall below freezing point. The lowest minima were 21° in the screen and 14° on the ground at Dalwhinnie on the 23rd, 24° in the screen at Glenmore Lodge on the 23rd and 25th and 14° on the ground at Glenlivet on the 24th and 26th.

There was a marked excess of rainfall over most of Scotland, especially in East, Central and Southern districts where totals exceeded double the average. Small regions in Skye, Inverness-shire and Wester Ross had slightly less than the normal rainfall. Only in 1890 and 1939 has Scotland experienced a wetter November. Perth had its highest November total since 1855 and Aberdeen, Dundee and Braemar their highest since 1866. In many places it rained nearly every day, very wet days being the 4th, 5th, 17th and 23rd. On the 4th and 5th over 40 observers measured upwards of 2 inches in 24 hours. The prolonged downpours gave rise to severe flooding, notably along the rivers Dee, Don, Tay, Isla and Tweed. The largest falls in 24 hours—all on the 4th—were 4.39 at Ardeonaig Manse (Loch Tay), 4.06 at Tyndrum (Perthshire), 3.71 at Ardkinglas (Loch Fyne), 3.65 at Stronvar (Balquhitter), 3.47 at Aberfeldy and 3.40 at Bridge of Dye, in Kincardineshire.

The month was mainly dull and cloudy with deficiencies of up to 20 hours in some districts. Helensburgh had its dullest November since 1938 and Dalwhinnie its dullest for 20 years. At four stations, viz. Fort Augustus, Fort William, Onich and Dalwhinnie aggregates failed to reach 20 hours bright sunshine for the whole month. In this very dull month, the sunniest places were Turnhouse Airport (60), Davidson's Mains (Edinburgh), Leuchars, Dunbar and Kirkcaldy, each with 59 hours.

Snow, sleet and hail showers were frequent during the cold spell. Thunder occurred mainly locally but fog was rather widespread at times. Gales were reported on 17 days, wind speed in gusts reaching 60-70 miles per hour at exposed places on the 4th/5th, 28th and 30th.

Meteorological Notes (continued).**DECEMBER 1951.**

The prevalence of west and south-west winds made the month one of the mildest Decembers of recent years. There were, however, rather severe frosts in the second and last weeks. Western districts were excessively wet and rather cloudy, whereas East Scotland was mainly dry and sunny. Gales occurred on 24 days, a high frequency even for a winter month.

The month was milder than usual except in a few districts in the North and West. Maxima were in general well above the seasonal level except on the 10th-12th and in the closing week when severe frosts were registered at high level stations. On the 11th, screen temperature fell to 7° F. at Dalwhinnie and Braemar and to 8° at Glenlivet. The corresponding ground readings were +1° F. at Dalwhinnie, 4° at Braemar and 5° at Glenlivet. The warmest weather occurred on the 3rd-5th and around the 15th. The thermometer rose to 58 at Kilmarnock on the 14th and to 57 at Fortrose and Gordon Castle on the 4th. Mean temperature for the month was 41.0° F. which is 1.5° above average. At Perth, Kirkcaldy and Fort William the excess amounted to 2° or more.

The past month was one of the wettest Decembers of the past 20 years. Most western areas received a large excess in rainfall but over parts of East Scotland totals were 50 per cent. below average. Marchmont (with 1.22 inches) had its driest December for ten years. In contrast some remarkably high totals were reported from the West; for example at Kinlochquoich (23.33 inches), Kinloch Hourn (20.76) and Kingairloch (20.13). There were many very wet days which resulted in flooding in some places. On the 3rd, 2.80 inches fell at Kinlochquoich while Kinloch Hourn had 2.67 on the 7th, Kingairloch 2.25 on the 21st and Inverailort 2.19 on the 21st.

A good deal of snow occurred during the cold spells. It lay to a depth of 9 inches at Tomintoul and Grantown-on-Spey on the 10th and Shetland and Argyll had a deep covering. Appreciable snow fell in the Highlands on Boxing Day.

Eastern districts had abundant sunshine, and aggregates were about average in West Scotland. Stations in Aberdeenshire returned the best records, the highest for the month being Craibstone (72 hours), Rattray Head (68) and Dyce Airport (67). In the West and North several places had less than 20 hours, for instance, Fort William (7 hours), Fort Augustus (13), Lerwick (13), Onich (17), Benmore, Argyll (17) and Greenock (17).

Fog was widespread on December 13th especially in the Clyde area where land, sea and air services were seriously delayed. There was about the normal frequency of thunder, but more gales occurred than in any other month of 1951. During a violent gale on the 30th gusts rose to 108 m.p.h. at Millport and to about 100 m.p.h. at Benbecula, Tiree, Turnhouse and Bell Rock.

TABLE I.—BIRTHS STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGHs OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 31ST DECEMBER 1951.
